

PP SMART window sill connection profile

The window sill connection profile is suitable for 5 chamber **Salamander STREAMLINE 76** window profiles.

The window sill connection profile has excellent thermal insulation properties which are improved by heat-insulating seal made of soft PVC.

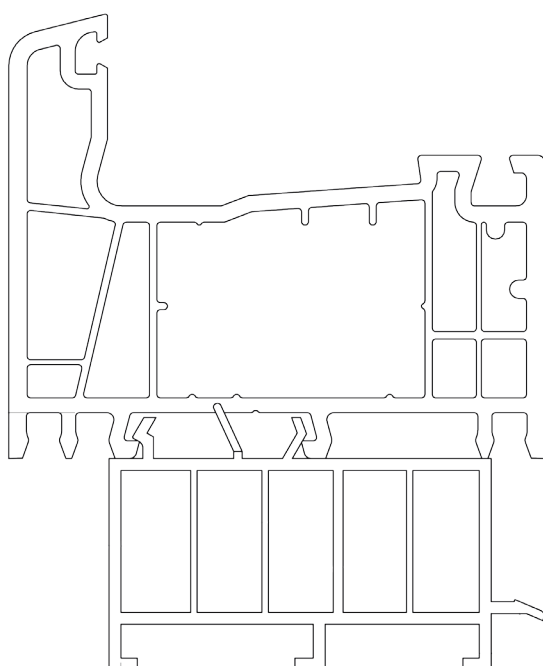

ELMONT NB, s.r.o. window sill connection profiles are sufficiently thick-walled. That is the reason they do not crack and can withstand even greater load.

Our window sill connection profiles also include an attachment for a windowsill.

This window sill connection profile meets current requirements of standards related to energy efficiency.
